GOLD COAST CORRIDOR'S ESTATE AGENT SALES

# Welcome

On behalf of everyone at Natgroup, I'd like to extend a very warm welcome to this week's edition of Natgroup magazine.

Lately I have been receiving numerous emails and text messages from people around the country asking whether they should wait and see what interest rates do or to buy now!

As an overview of where the economy is possibly heading we look at employment and interest rates, however what we should be looking at is own personal situation. Things to consider are will you need two incomes for your household?, are you extending your family? and is there room in your existing family budget for any adjustments?

If you talk to most real estate agents we will always tell you how. However there are some better times than others to buy. It is always a good time to buy if you need a property and hold long term.

There are ways to see what's happening in the market place. When the market is slow you see for sale signs up for a very long period of time or the same property has been advertised for months. This indicates you have time to think what and where you are going to buy and get a better price.

When a market begins to change, even us real estate agents don't see it turn until the market is already on it's way.

To best see a market change, keep focused on our window displays and for sale signs. When you see them going under contract and more sold signs. When you see these movements you know the market is on the go!
